PROFILE

I am a Shopify and PHP (Laravel) developer with over 9 years of experience in web development, specializing in various aspects of the development cycle. I possess a strong command of multiple coding languages and excel in problem-solving. Throughout my career, I have worked extensively with technologies such as Core PHP, Laravel, React JS, JavaScript, Shopify, Shopify Polaris, and Shopify GraphQL APIs. My expertise includes developing both public apps using Remix.js and Laravel, as well as private apps, showcasing my versatility and dedication to delivering high-quality solutions.

Additionally, it provides merchants with tools to efficiently manage wishlists, display popular products through engaging popups on the admin and storefront, and track trends with informative monthly wishlist charts. The app aims to foster customer engagement, drive sales, and offer a seamless support experience within the app, ultimately contributing to the overall success and growth of Shopify stores.
- URL: <https://apps.shopify.com/ai-wishlist>
- Used Technologies: Laravel, JavaScript, MySql, Tailwind CSS, AlpinJs, Liquid, Json

Product Custom Options (Shopify Public App)

- Role: Developer
- In this project, our primary goal is to empower customers with a range of customizable options related to our products. We believe in providing a tailored and personalized experience, allowing customers to have the freedom to customize products according to their unique preferences. From selecting colors and styles to adding personalized text or images, our aim is to offer a seamless and enjoyable customization process, ensuring that each customer can create a product that truly reflects their individual taste and style. This project is dedicated to enhancing the overall satisfaction and engagement of our valued customers through a personalized and customizable product experience
- URL : <https://apps.shopify.com/product-variety-pro>
- Used Technologies: Laravel, Javascript, Sqlite, Shopify Polaris, Liquid, Json

Alertify (Shopify Public App)

- Role: Developer
- This app aims to create an Announcement bar with a different type of design for the Shopify Store.Alertify app helps us to inform visitors of a promotion, new stock alerts, on-sale products, and more. We can fully customize the bars including colors, and text, and even integrate links or we can select the preset bars. Active/Deactivate the bar on the store front end.
- URL : <https://apps.shopify.com/alertify>
- Used Technologies: React Js, NodsJs, Javascript, MongoDB, Shopify Polaris, Liquid, Json

Personalised Gift Supply (Shopify Public App)

- Role: Developer
- The core objective of this project is to achieve seamless integration with an extensive array of customizable products. Elevate the shopping experience with live previews, providing customers a unique and personalized preview of their selections. Our focus extends to streamlining order fulfillment processes, offering automatic updates, discreet plain packaging, and the convenience of next-day delivery. Additionally, we are committed to a continuous product expansion strategy, ensuring our website stays fresh and enticing, featuring a diverse range of offerings for our valued customers.
- URL : <https://apps.shopify.com/personalised-gift-supply>
- Used Technologies: React Js, Laravel, Javascript, Mysql, Shopify Polaris, Liquid, Json

Biomass (Store Setup and Shopify Theme Functionality)

- Role: Developer
- This is a Shopify project in which I need to build a product filter functionality that can help customers find required auto parts from the home page. It can filter products on collection, tags, and metafield based. Customer only needs to select collection, tags or metafields in form fields. And fields value is come from a json file which is uploaded to store. I also build a section to configure the filter which tag filename and filter type (Metafield or Tags) and order sequence of fields to show on home page.
- Used Technologies : HTML, CSS, JavaScript, Liquid, JSON
- URL : <https://biomasssparesonline.co.uk/>

FD-Racing (Shopify Theme Functionality)

- Role: Developer
- This is a Shopify project in which I also need to build a product filter functionality that can help customers find required auto parts from the home page. It can filter products on collection, tags, and metafield based. Customer only needs to select collection, tags or metafields in form fields. And fields value is come from a json file which is uploaded to store. I also build a section to configure the filter which tag filename and filter type (Metafield or Tags) and order sequence of fields to show on home page.
- Used Technologies : HTML, CSS, JavaScript, Liquid, JSON
- URL : <https://fdracing.co.uk/>

Mansfield Sport Group (Shopify Functionality with custom Shopify App)

- Role: Developer
- This is a Shopify project in this project we created a Shopify custom or Private app to create Shopify product bundles using Laravel and create functionality to create a bundle of products with custom pricing and discount. We also created a different template to show bundle products when the user goes to bundle a product customer has to choose one variant of each product and if the customer wants to print some text or number on products the customer can enter the desired text or number in the fields available in each product card. My work in this project is to create & design a template using HTML, CSS, and Liquid to show the bundle products and handle the product selection and printable text and number, calculate the price of text & number, and add to the cart the bundle product with customer data.
- Used Technologies: HTML, CSS, JavaScript, Liquid, JSON, Laravel
- URL : <https://www.mansfieldsportsgroup.com/>
